BAOBAB

- European sourced recycled waste yarn
- Production of recycled yarn saves about 10% fresh water and about 52% of necessary energy*

* figures based on the environmental performance chart between recycled polyester and virgin polyester

WITH 100% RECYCLED MICROFIBER FABRIC

SLEEVE WITH BEST WATER RETENTION IN OUR RANGE

PUSH BUTTONS

The monumental Baobab trees, giants of the ages, are known for their extraordinary longevity and excellent water storage capacity. This 'tree of life' is essential for the African savanna ecosystem.

Naming our sleeve made with recycled microfiber material, 'Baobab' after the iconic tree, we feel we are doing the right thing and cause less harm to the environment.

MOERMAN GOES GREEN

With the Baobab, we want to do our part in doing responsible business, therefore we're funding trees in a forest which will contribute to the creation and maintenance of carbon sinks during its lifetime.
